Deep neural network method for predicting the iron concentration in silicon solar cells by current-voltage characteristics

Oleg Olikh, Oleg Lozitsky, Oleksii Zavhorodnii

- Proposed deep learning-based method to predict iron contamination in Si-SC by using IV curve.
- The simulated IV characteristics are used to create training and test datasets.
- The DNN's configurations are proposed.
- The mean squared relative error of prediction is up to 0.005.
